ident we bear witness to the enduring strength of our Constitution. We affirm the promise of our democracy. We recall that what binds this nation together is not the co
lors of our skin or the tenets of our faith or the origins of our names. What makes us exceptional, what makes us American, is our allegiance to an idea articulated in
a declaration made more than two centuries ago. We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with cer
tain unalienable rights; that among these are life, liberty, and the pursuit of happiness. Today we continue a never-ending journey to bridge the meaning of those words
with the realities of our time. For history tells us that while these truths may be self-evident, they've never been self-executing; that while freedom is a gift from G
od, it must be secured by His people here on Earth. The patriots of 1776 did not fight to replace the tyranny of a king with the privileges of a few or the rule of a mo
b. They gave to us a republic, a government of, and by, and for the people, entrusting each generation to keep safe our founding creed. And for more than two hundred ye
ars, we have. Through blood drawn by lash and blood drawn by sword, we learned that no union founded on the principles of liberty and equality could survive half-slave
and half-free. We made ourselves anew, and vowed to move forward together. Together, we determined that a modern economy requires railroads and highways to speed travel
and commerce, schools and colleges to train our workers. Together, we discovered that a free market only thrives when there are rules to ensure competition and fair pla
y. Together, we resolved that a great nation must care for the vulnerable, and protect its people from life's worst hazards and misfortune. Through it all, we have neve
r relinquished our skepticism of central authority, nor have we succumbed to the fiction that all society's ills can be cured through government alone. Our celebration
of initiative and enterprise, our insistence on hard work and personal responsibility, these are constants in our character. But we have always understood that when tim

- FOMC Longer-Run Goals and Monetary Policy Strategy

http://www.federalreserve.gov/monetarypolicy/default.htm

Statement on Longer-Run Goals and Monetary Policy Strategy

As amended effective January 28, 2014

The Federal Open Market Committee (FOMC) is firmly committed to fulfilling its statutory mandate from the Congress of promoting maximum employment, stable prices, and moderate long-term interest rates. The Committee seeks to explain its monetary policy decisions to the public as clearly as possible. Such clarity facilitates well-informed decisionmaking by households and businesses, reduces economic and financial uncertainty, increases the effectiveness of monetary policy, and enhances transparency and accountability, which are essential in a democratic society.

Inflation, employment, and long-term interest rates fluctuate over time in response to economic and financial disturbances. Moreover, monetary policy actions tend to influence economic activity and prices with a lag. Therefore, the Committee's policy decisions reflect its longer-run goals, its medium-term outlook, and its assessments of the balance of risks, including risks to the financial system that could impede the attainment of the Committee's goals.

The inflation rate over the longer run is primarily determined by monetary policy, and hence the Committee has the ability to specify a longer-run goal for inflation. The Committee reaffirms its judgment that inflation at the rate of 2 percent, as measured by the annual change in the price index for personal consumption expenditures, is most consistent over the longer run with the Federal Reserve's statutory mandate. Communicating this inflation goal clearly to the public helps keep longer-term inflation expectations firmly anchored, thereby fostering price stability and moderate long-term interest rates and enhancing the Committee's ability to promote maximum employment in the face of significant economic disturbances.

The maximum level of employment is largely determined by nonmonetary factors that affect the structure and dynamics of the labor market. These factors may change over time and may not be directly measurable. Consequently, it would not be appropriate to specify a fixed goal for employment; rather, the Committee's policy decisions must be informed by assessments of the maximum level of employment, recognizing that such assessments are necessarily uncertain and subject to revision. The Committee considers a wide range of indicators in making these assessments. Information about Committee participants' estimates of the longer-run normal rates of output growth and unemployment is published four times per year in the FOMC's Summary of Economic Projections. For example, in the most recent projections, FOMC participants' estimates of the longer-run normal rate of unemployment had a central tendency of 5.2 percent to 5.8 percent.

In setting monetary policy, the Committee seeks to mitigate deviations of inflation from its longer-run goal and deviations of employment from the Committee's assessments of its maximum level. These objectives are generally complementary. However, under circumstances in which the Committee judges that the objectives are not complementary, it follows a balanced approach in promoting them, taking into account the magnitude of the deviations and the potentially different time horizons over which employment and inflation are projected to return to levels judged consistent with its mandate.

The Committee intends to reaffirm these principles and to make adjustments as appropriate at its annual organizational meeting each January.

Statement on Longer-Run Goals and Monetary Policy Strategy
As amended effective January 28, 2014

The Federal Open Market Committee (FOMC) is firmly committed to fulfilling its statutory mandate from the Congress of pro moting maximum employment, stable prices, and moderate long-term interest rates. The Committee seeks to explain its monetary poli cy decisions to the public as clearly as possi ble. Such clarity facilitates well-informed decisionmaking by households and business es, reduces economic and financial uncertain ty, increases the effectiveness of monetary policy, and enhances transparency and ac countability, which are essential in a demo cratic society.
Inflation, employment, and long-term inter est rates fluctuate over time in response to economic and financial disturbances. More over, monetary policy actions tend to influ ence economic activity and prices with a lag.
Therefore, the Committee's policy decisions reflect its longer-run goals, its medium-term outlook, and its assessments of the balance of risks, including risks to the financial system that could impede the attainment of the Com mittee's goals.
The inflation rate over the longer run is primarily determined by monetary policy, and hence the Committee has the ability to specify a longer-run goal for inflation. The Commit tee reaffirms its judgment that inflation at the rate of 2 percent, as measured by the annual change in the price index for personal con sumption expenditures, is most consistent over the longer run with the Federal Reserve's statutory mandate. Communicating this infla tion goal clearly to the public helps keep longer-term inflation expectations firmly an chored, thereby fostering price stability and moderate long-term interest rates and enhanc ing the Committee's ability to promote maxi mum employment in the face of significant

economic disturbances. The maximum level of employment is
largely determined by nonmonetary factors that affect the structure and dynamics of the labor market. These factors may change over time and may not be directly measurable. Consequently, it would not be appropriate to specify a fixed goal for employment; rather, the Committee's policy decisions must be informed by assessments of the maximum level of employment, recognizing that such assessments are necessarily uncertain and sub ject to revision. The Committee considers a wide range of indicators in making these as sessments. Information about Committee participants' estimates of the longer-run nor mal rates of output growth and unemployment is published four times per year in the FOMC's Summary of Economic Projections. For example, in the most recent projections, FOMC participants' estimates of the longerrun normal rate of unemployment had a cen tral tendency of 5.2 percent to 5.8 percent.
In setting monetary policy, the Committee seeks to mitigate deviations of inflation from its longer-run goal and deviations of employ ment from the Committee's assessments of its maximum level. These objectives are general ly complementary. However, under circum stances in which the Committee judges that the objectives are not complementary, it fol lows a balanced approach in promoting them, taking into account the magnitude of the devi ations and the potentially different time hori zons over which employment and inflation are projected to return to levels judged consistent with its mandate.
The Committee intends to reaffirm these principles and to make adjustments as appro priate at its annual organizational meeting each January.

ODBC: Open DataBase Connectivity

- What is ODBC?
  - ✓ A standard programming language middleware API for accessing database management systems (DBMS)
  - ✓ Independent of database systems and operating systems
    - Independence is accomplished by using an ODBC driver as a translation layer between the application and the DBMS
    - An application written using ODBC can be ported to other platforms, both on the client and server side with a few changes to the data access code
  - ✓ Drivers exist for all major DBMSs, may other data sources even like csv or text files

ODBC: Open DataBase Connectivity

- If you are provided with a DB table as a file
  - ✓ Journal article meta-data for technology management
    - 11 journals for recent 10 years

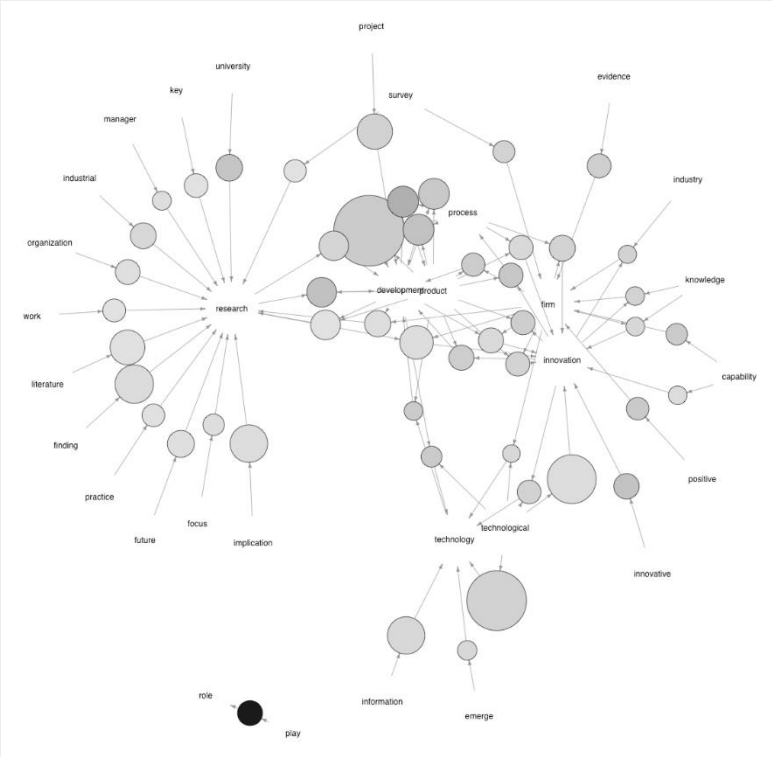
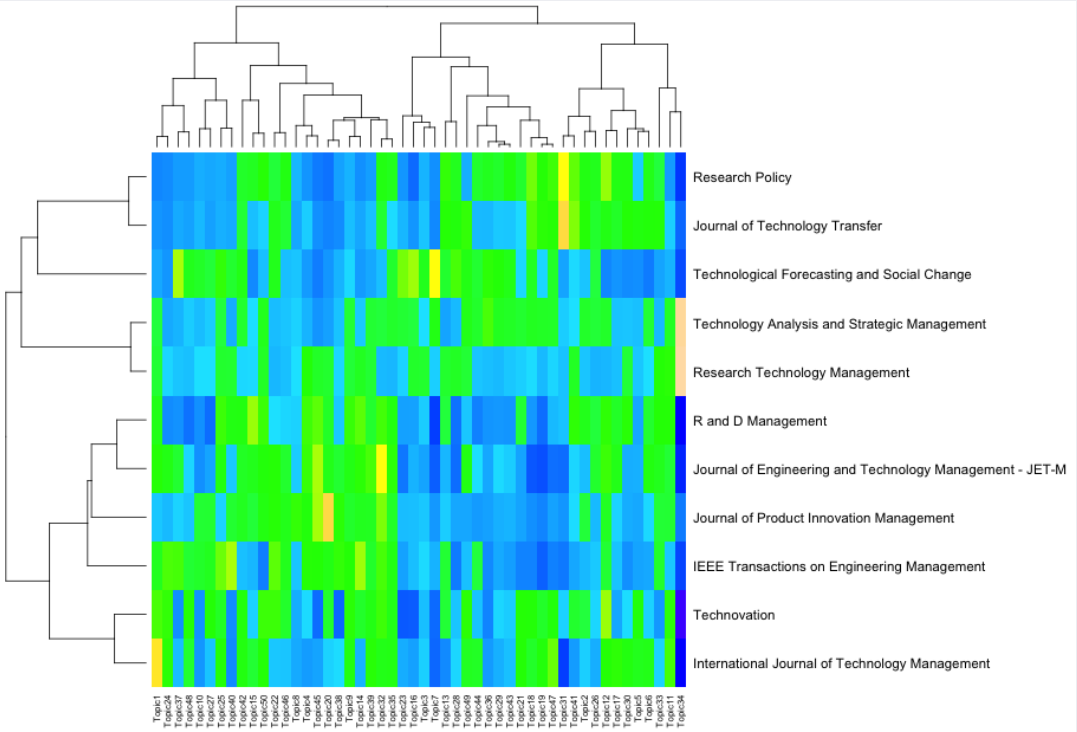
- Text Mining
  - ✓ Step 3: Analyze the texts with various techniques

Keywords association



Journal/Topic Clustering



AGENDA

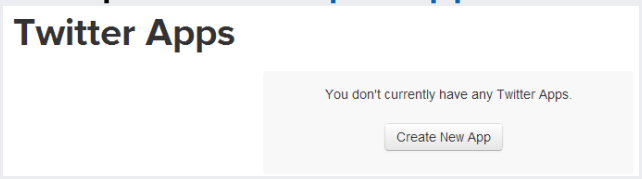
01 From Text Files to Data

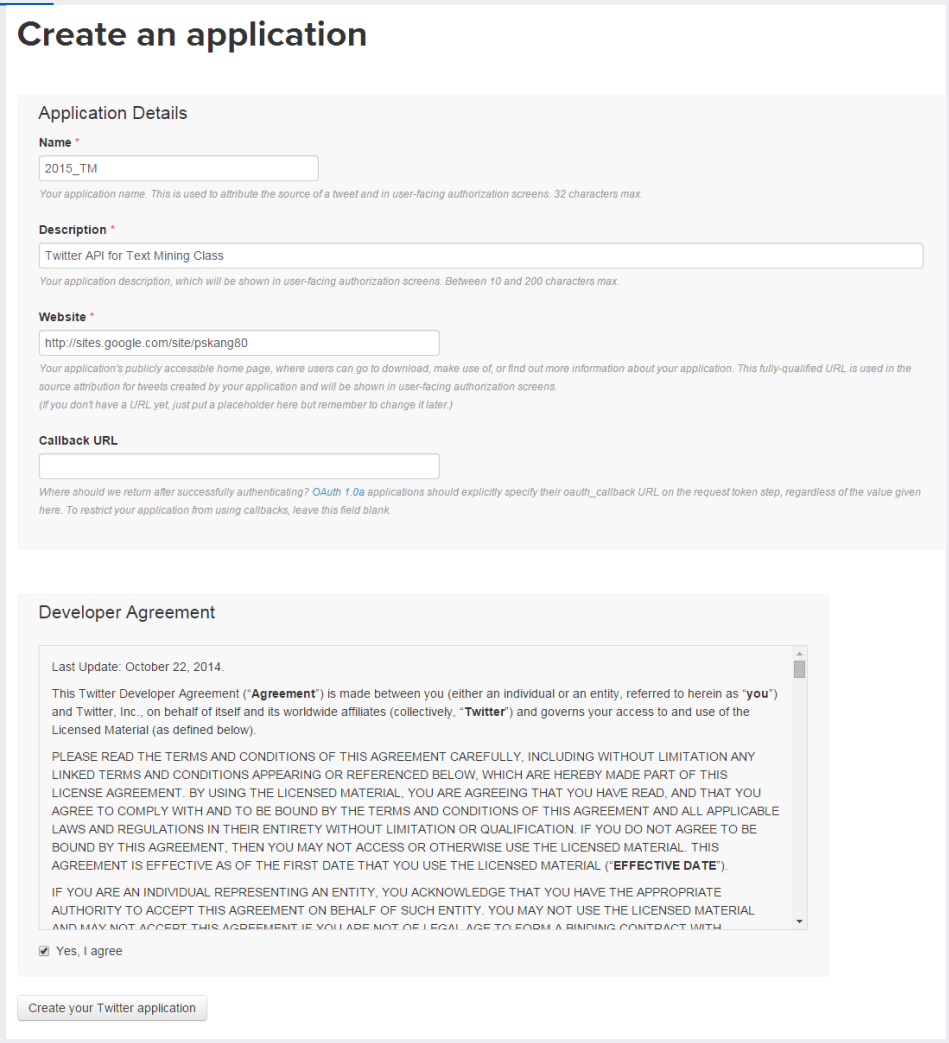
02 Collect Texts using APIs

03 Web Scraping

Collect Twitter Mentions

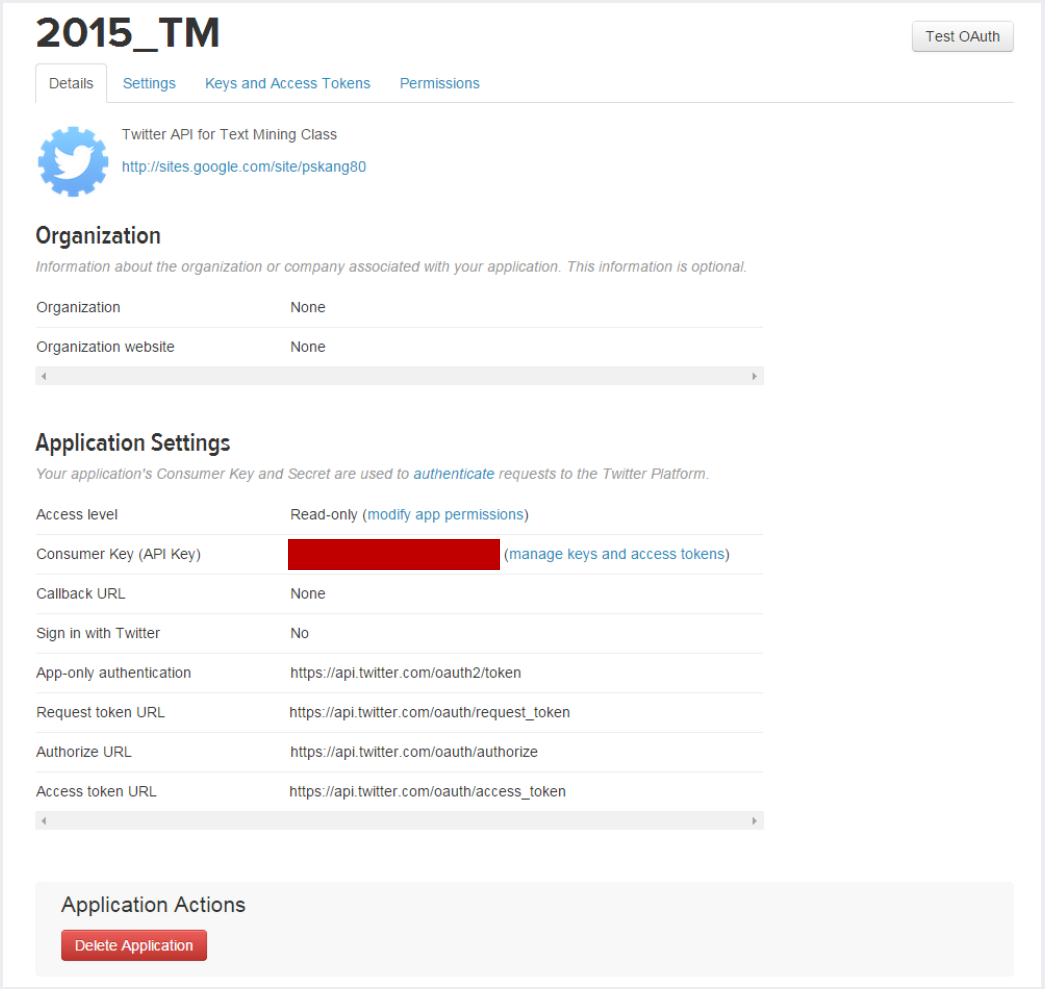
- Get an authorized authentication
  - ✓ Step 1: visit https://apps.twitter.com/





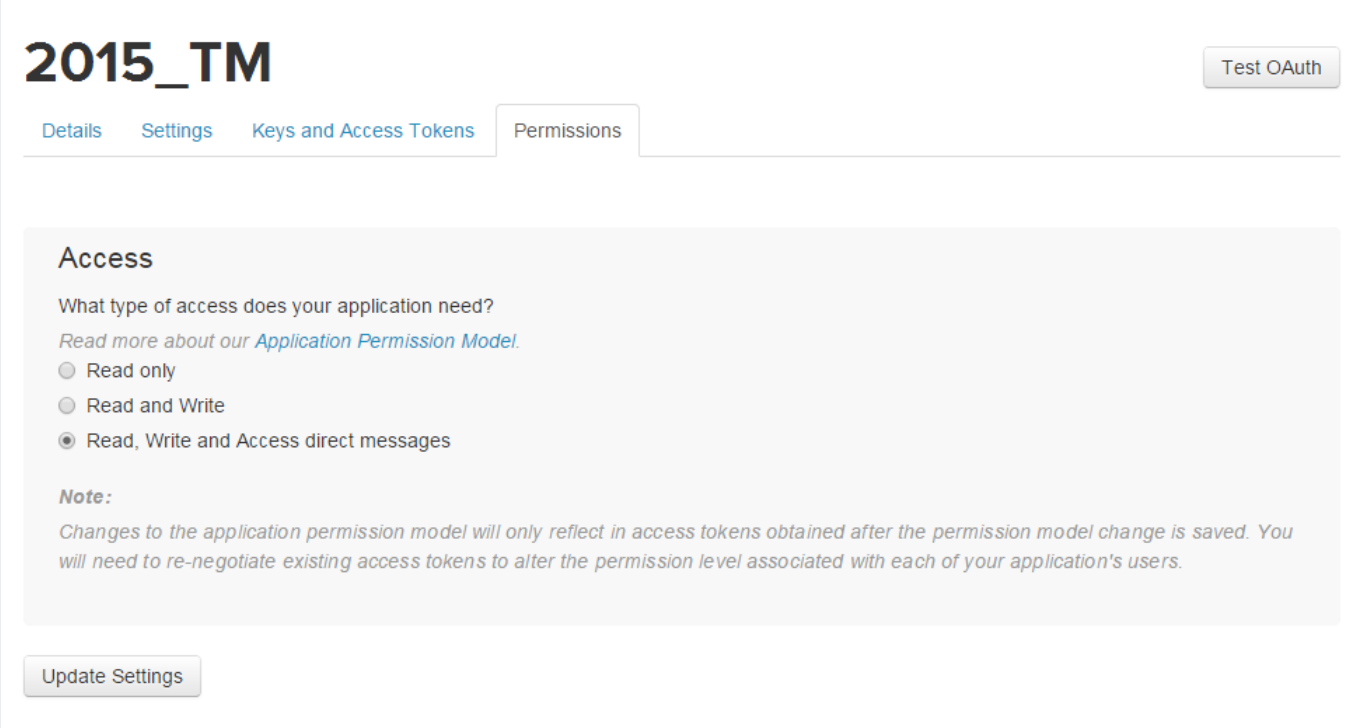
Collect Twitter Mentions

- Get an authorized authentication
  - ✓ Step 2: record necessary URLs



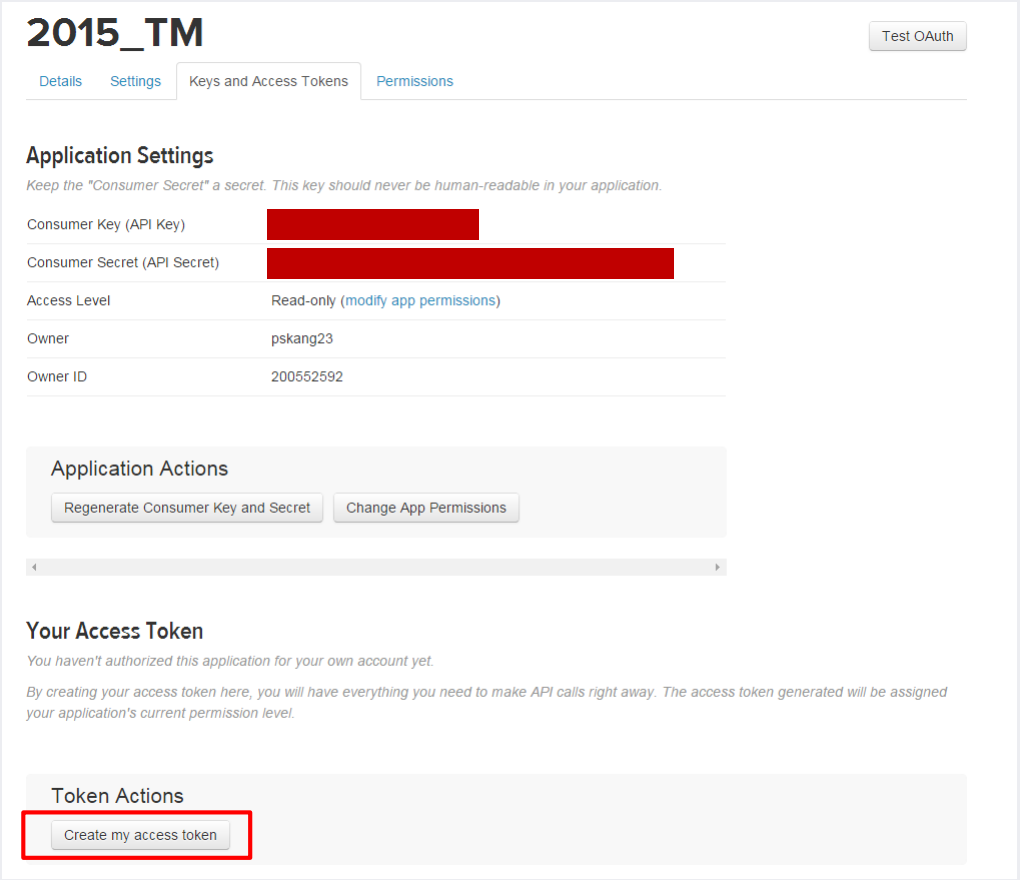
Collect Twitter Mentions

- Get an authorized authentication
  - ✓ Step 2: in the permissions tab



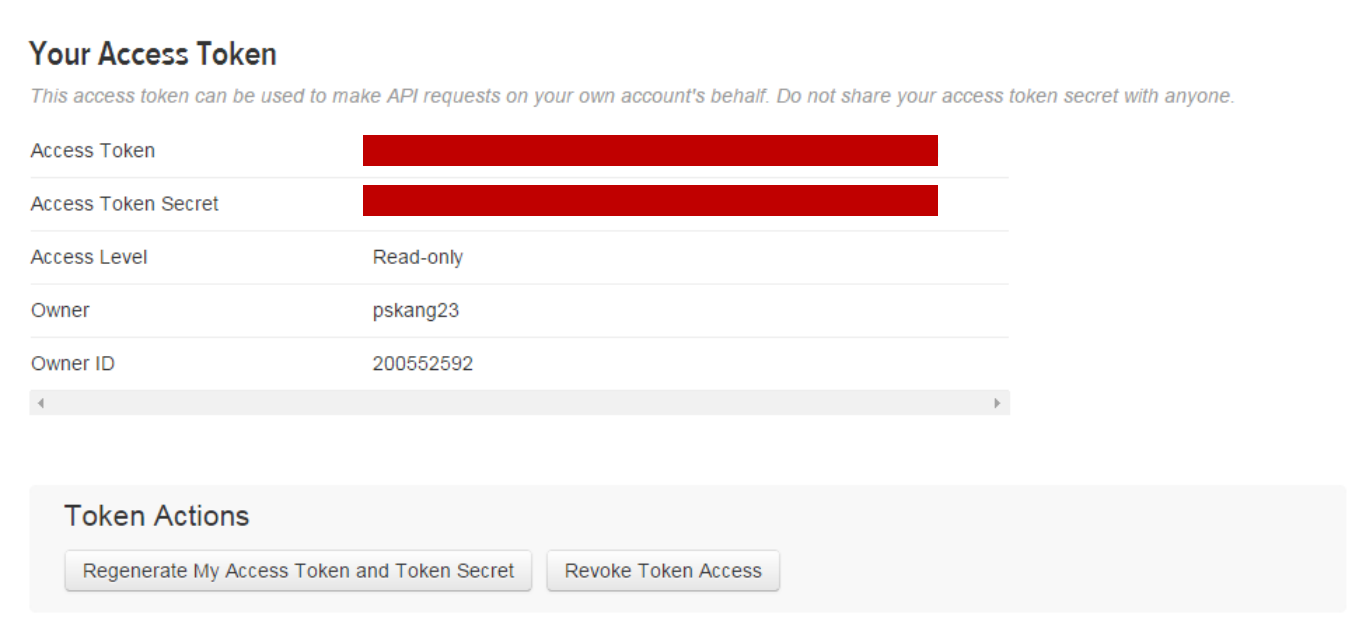
Collect Twitter Mentions

- Get an authorized authentication
  - ✓ Step 3: get the access token



Collect Twitter Mentions

- Get an authorized authentication
  - ✓ Step 3: get the access token



Collect Twitter Mentions

- Get an authorized authentication
  - ✓ Step 4: complete the authentication process (for twitteR)
    - Provide consumer_key, consumer_secret, access_token, access_secret information with **setup_twitter_oauth** function

```
# Case 2: Collect Texts using Twitter API --------------------------------
install.packages("twitteR")
install.packages("ROAuth")
install.packages("RCurl")
install.packages("streamR")
install.packages("rjson")
install.packages("base64enc")
install.packages("httr")

library(twitteR)
library(ROAuth)
library(RCurl)
library(streamR)
library(rjson)
library(base64enc)
library(httr)

consumer_key= [redacted]
consumer_secret= [redacted]
access_token = [redacted]
access_secret = [redacted]

setup_twitter_oauth(consumer_key, consumer_secret, access_token, access_secret)
```

Collect Twitter Mentions

- Example 1: Get 100 recent mentions from @IBMWatson

```
# Retrieve the first 100 tweets (or all tweets if fewer than 100)
# from the user timeline of @IBMWatson
WatsonTweets <- userTimeline("IBMWatson", n=100)
WatsonTweets[1:10]
```

```

Collect Twitter Mentions (streamR)

- Additional Twitter API: streamR
  - ✓ Provide a series of function that allow R users to access Twitter's filter, sample, and user streams, and to parse the output into data frames.

```
# Twitter stream data collection
download.file(url="http://curl.haxx.se/ca/cacert.pem", destfile="cacert.pem")

reqURL <- "https://api.twitter.com/oauth/request_token"
accessURL <- "https://api.twitter.com/oauth/access_token"
authURL <- "https://api.twitter.com/oauth/authorize"
apiKey <- [redacted]
apiSecret <- [redacted]

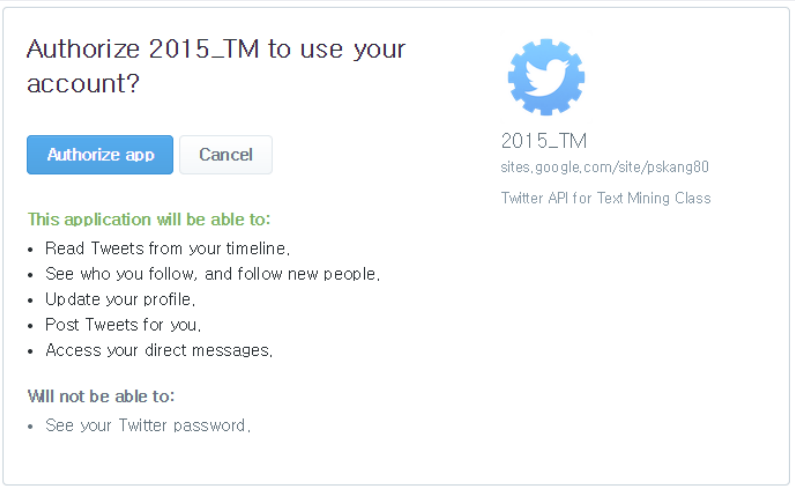
twitCred <- OAuthFactory$new(consumerKey=apiKey, consumerSecret=apiSecret,
                             requestURL=reqURL, accessURL=accessURL, authURL=authURL)

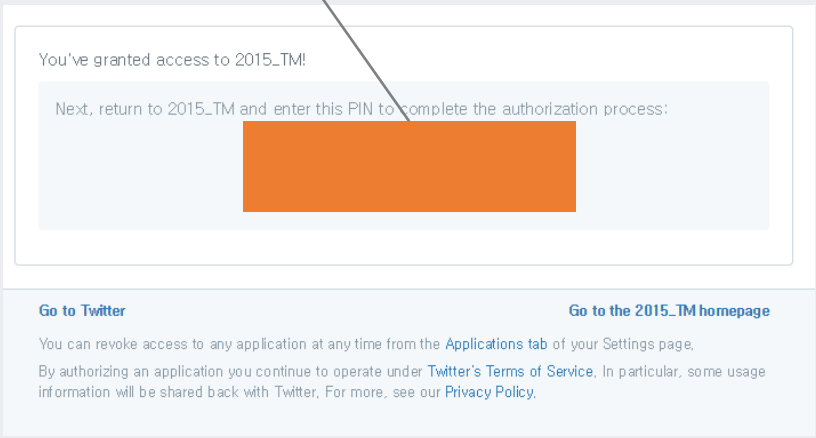
twitCred$handshake(cainfo ="cacert.pem")
```

Collect Twitter Mentions (streamR)

- Get an authorized authentication
  - ✓ Step 4: complete the authentication process

```
> options(RCurlOptions = list(cainfo = system.file("CurlSSL", "cacert.pem", package = "RCurl")))
> reqURL <- "https://api.twitter.com/oauth/request_token"
> accessURL <- "https://api.twitter.com/oauth/access_token"
> authURL <- "https://api.twitter.com/oauth/authorize"
> apiKey <- "LnuGtk5bbndcBN3t3PWoA"
> apiSecret <- "W3hvDz48zgt4nCHIhMPBx4Ca3h09g7BZv2ZOOQk"
> twitCred <- OAuthFactory$new(consumerKey=apiKey, consumerSecret=apiSecret,
+ requestURL=reqURL, accessURL=accessURL, authURL=authURL)
> twitCred$handshake(cainfo = system.file("CurlSSL", "cacert.pem", package = "RCurl"))
To enable the connection, please direct your web browser to:
https://api.twitter.com/oauth/authorize?oauth_token=kIkNGvKXIdzQ1xT9mvGCEl92JPt375sJk6Ujga9vzoI
When complete, record the PIN given to you and provide it here: 5660683
```





Collect Twitter Mentions (streamR)

- Additional Twitter API: streamR
  - ✓ Provide a series of function that allow R users to access Twitter's filter, sample, and user streams, and to parse the output into data frames.

```
filterStream(file="AI.json", track="Artificial Intelligence", language = "en", timeout=30, oauth=twitCred)

readFile <- file("AI.json", "r")
streamTweets <- readLines(readFile, -1L)

dfMentions <- data.frame()

for (i in 1:length(streamTweets)){
  dfMentions <- rbind(dfMentions, as.data.frame(fromJSON(streamTweets[i])$text))
}
```

```
> filterStream(file="AI.json", track="Artificial Intelligence", language = "en", timeout=30, oauth=twitCred)
Capturing tweets...
Connection to Twitter stream was closed after 30 seconds with up to 18 tweets downloaded.
```

Collect Twitter Mentions (streamR)

- Additional Twitter API: streamR
  - ✓ Provide a series of function that allow R users to access Twitter's filter, sample, and user streams, and to parse the output into data frames.

```
> dfMentions
                                                                                                fromJSON(streamTweets[i])$text

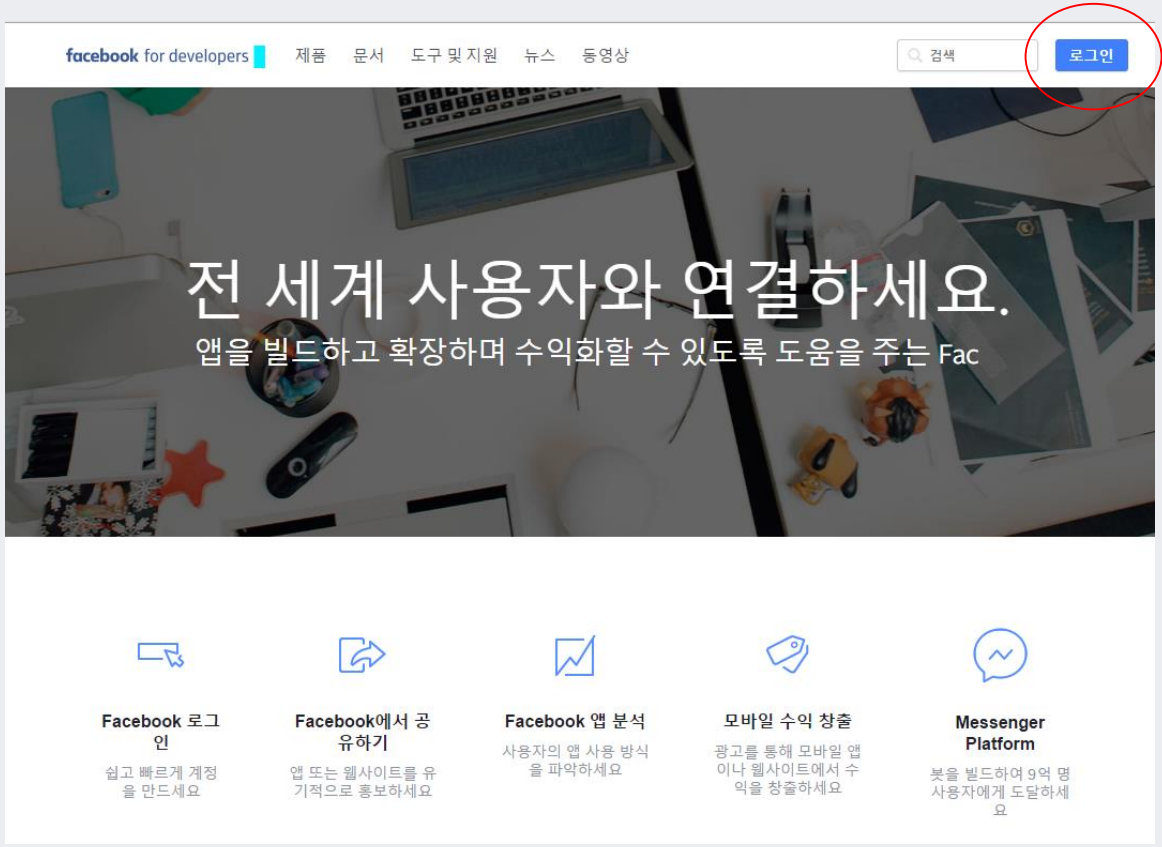
Collect Facebook Posts

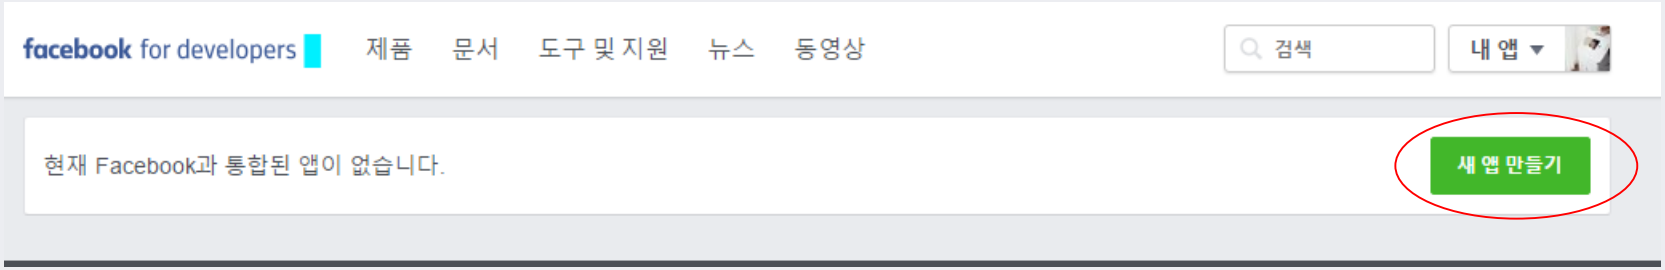
- Step 1: Registering an Application with Facebook
  - ✓ https://developers.facebook.com/



Login with your facebook account

Collect Facebook Posts

- Step 1: Registering an Application with Facebook
  - ✓ https://developers.facebook.com/

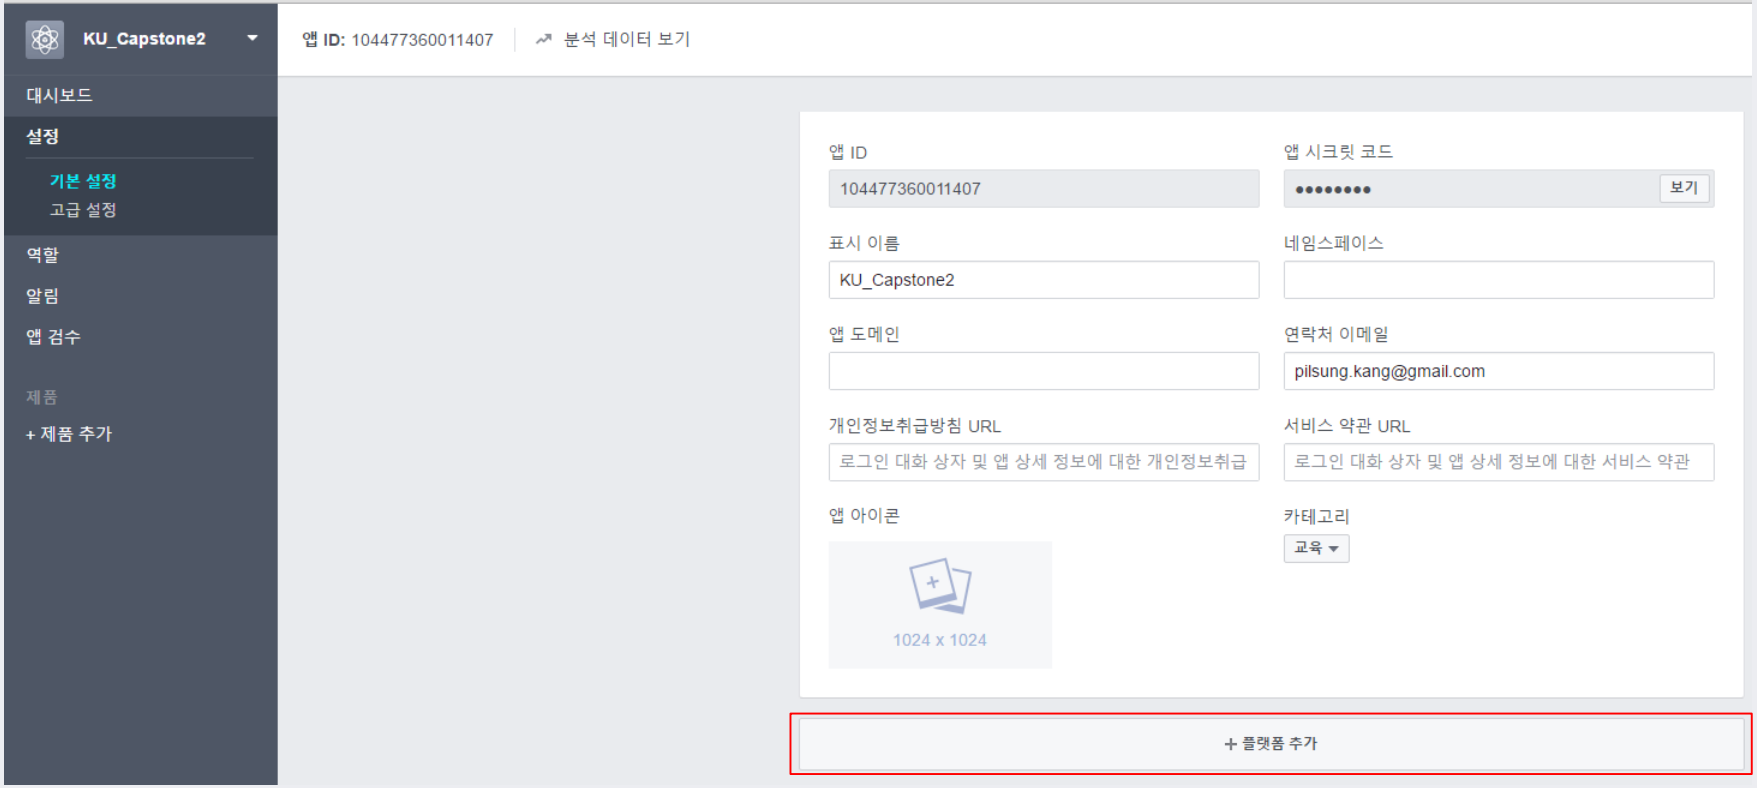


Collect Facebook Posts

- Step 1: Registering an Application with Facebook
  - ✓ Check the AppID & Secret code

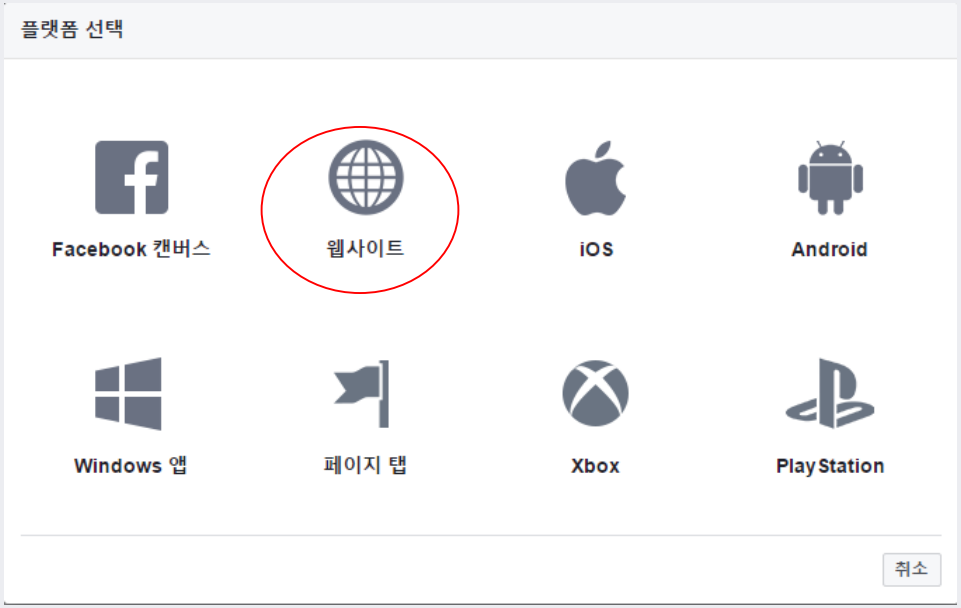
Collect Facebook Posts

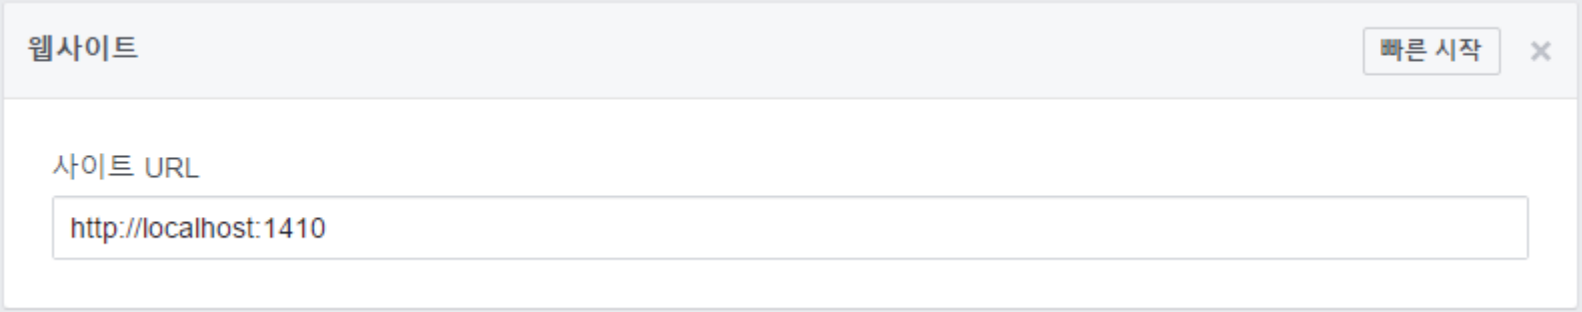
- Step 1: Registering an Application with Facebook
  - ✓ Add a new website with http://localhost:1410



Collect Facebook Posts

- Step 1: Registering an Application with Facebook
  - ✓ Add a new website with http://localhost:1410





Collect Facebook Posts

- Step 2: Create Oauth token to Facebook R session
  - ✓ Install Rfacebook package
  - ✓ Use your own app id & secret code

```
# Authentication Setting
my_oauth <- fbOAuth(app_id = "Your app ID", app_secret= "Your secret code")
save(my_oauth, file = "my_oauth")
load("my_oauth")
```

```
Authentication complete. Please close this page and return to R.
```

```
When done, press any key to continue...
Waiting for authentication in browser...
Press Esc/Ctrl + C to abort
Authentication complete.
Authentication successful.
```

Collect Facebook Posts

Best Speeches of Barack Obama through his 2009 Inauguration

Most Recent Speeches are Listed First

- Barack Obama – Inaugural Speech
- Barack Obama – Election Night Victory / Presidential Acceptance Speech – Nov 4 2008
- Barack Obama – Night Before the Election – the Last Rally – Manassas Virginia – Nov 3 2008
- Barack Obama – Democratic Nominee Acceptance Speech 2008 National Democratic Convention
- Barack Obama – "A World that Stands as One" – Berlin Germany – July 2008
- Barack Obama – Final Primary Night: Presumptive Nominee Speech
- Barack Obama – North Carolina Primary Night
- Barack Obama – Pennsylvania Primary Night
- Barack Obama – AP Annual Luncheon
- Barack Obama – A More Perfect Union "The Race Speech"
- Barack Obama – Texas and Ohio Primary Night
- Barack Obama – Potomac Primary Night

Obama Inaugural Address
20th January 2009

My fellow citizens:

I stand here today humbled by the task before us, grateful for the trust you have bestowed, mindful of the sacrifices borne by our ancestors. I thank President Bush for his service to our nation, as well as the generosity and cooperation he has shown throughout this transition.

Forty-four Americans have now taken the presidential oath. The words have been spoken during rising tides of prosperity and the still waters of peace. Yet, every so often the oath is taken amidst gathering clouds and raging storms. At these moments, America has carried on not simply because of the skill or vision of those in high office, but because We the People have remained faithful to the ideals of our forbearers, and true to our founding documents.

So it has been. So it must be with this generation of Americans.

That we are in the midst of crisis is now well understood. Our nation is at war, against a far-reaching network of violence and hatred. Our economy is badly weakened, a consequence of greed and irresponsibility on the part of some, but also our collective failure to make hard choices and prepare the nation for a new age. Homes have been lost; jobs shed; businesses shuttered. Our health care is too costly; our schools fail too many; and each day brings further evidence that the ways we use energy strengthen our adversaries and threaten our planet.

These are the indicators of crisis, subject to data and statistics. Less measurable but no less profound is a sapping of confidence across our land - a nagging fear that America's decline is inevitable, and that the next generation must lower its sights.

Today I say to you that the challenges we face are real. They are serious and they are many. They will not be met easily or in a short span of time. But know this, America - they will be met.

On this day, we gather because we have chosen hope over fear, unity of purpose over conflict and discord.

On this day, we come to proclaim an end to the petty grievances and false promises, the recriminations and worn out dogmas, that for far too long have strangled our politics.

We remain a young nation, but in the words of Scripture, the time has come to set aside childish things. The time has come to reaffirm our enduring spirit; to choose our better history; to carry forward that precious gift, that noble idea, passed on from generation to generation: the God-given promise that all are equal, all are free, and all deserve a chance to pursue their full measure of happiness.

In reaffirming the greatness of our nation, we understand that greatness is never a given. It must be earned. Our journey has never been one of short-cuts or settling for less. It has not been the path for the faint-hearted - for those who prefer leisure over work, or seek only the pleasures of riches and fame. Rather, it has been the risk-takers, the doers, the makers of things - some celebrated but more often men and women obscure in their labor, who have carried us up the long, rugged path towards prosperity and freedom.

What we need to make a web page

```

Web Scraping

- To extract information that we need from HTML/XML documents, we should also understand Xpath expressions

  - ✓ A syntax for defining parts of an XML document
  - ✓ Uses path expressions to navigate in XML documents
    - To select nodes or node-sets in an XML document
    - Path expressions look very much like the expressions you see when you work with a traditional computer file system
  - ✓ Contains a library of standard functions
    - Include over 100 built-in functions (string values, numeric values, date and time comparison, etc.)
  - ✓ For more information, visit http://www.w3schools.com/xml/xml_xpath.asp

Web Scraping

- Xpath terminology
  - ✓ Nodes: element, attribute, text, namespace, processing-instruction, comment, document
    - XML documents are treated as trees of nodes
    - Root node: the topmost element of the tree
  - ✓ Atomic values: nodes with no children or parent
  - ✓ Items: atomic values or nodes

Look at the following XML document:

```
<?xml version="1.0" encoding="UTF-8"?>

<bookstore>
  <book>
    <title lang="en">Harry Potter</title>
    <author>J K. Rowling</author>
    <year>2005</year>
    <price>29.99</price>
  </book>
</bookstore>
```

Example of nodes in the XML document above:

```
<bookstore> (root element node)

<author>J K. Rowling</author> (element node)

lang="en" (attribute node)
```

Example of atomic values:

```
J K. Rowling

"en"
```

Web Scraping

- Xpath terminology
  - ✓ Relationship of Nodes: Parent, children, siblings, ancestors, descendants

Parent

Each element and attribute has one parent.

In the following example; the book element is the parent of the title, author, year, and price:

```
<book>
  <title>Harry Potter</title>
  <author>J K. Rowling</author>
  <year>2005</year>
  <price>29.99</price>
</book>
```

Children

Element nodes may have zero, one or more children.

In the following example; the title, author, year, and price elements are all children of the book element:

```
<book>
  <title>Harry Potter</title>
  <author>J K. Rowling</author>
  <year>2005</year>
  <price>29.99</price>
</book>
```

Siblings

Nodes that have the same parent.

In the following example; the title, author, year, and price elements are all siblings:

```
<book>
  <title>Harry Potter</title>
  <author>J K. Rowling</author>
  <year>2005</year>
  <price>29.99</price>
</book>
```

Ancestors

A node's parent, parent's parent, etc.

In the following example; the ancestors of the title element are the book element and the bookstore element:

```
<bookstore>

<book>
  <title>Harry Potter</title>
  <author>J K. Rowling</author>
  <year>2005</year>
  <price>29.99</price>
</book>

</bookstore>
```

Descendants

A node's children, children's children, etc.

In the following example; descendants of the bookstore element are the book, title, author, year, and price elements:

```
<bookstore>

<book>
  <title>Harry Potter</title>
  <author>J K. Rowling</author>
  <year>2005</year>
  <price>29.99</price>
</book>

</bookstore>
```

Web Scraping

- Xpath Syntax
  - ✓ Example document: http://www.w3schools.com/xpath/books.xml

```xml
<?xml version="1.0" encoding="UTF-8"?>

<bookstore>

<book category="COOKING">
  <title lang="en">Everyday Italian</title>
  <author>Giada De Laurentiis</author>
  <year>2005</year>
  <price>30.00</price>
</book>

<book category="CHILDREN">
  <title lang="en">Harry Potter</title>
  <author>J K. Rowling</author>
  <year>2005</year>
  <price>29.99</price>
</book>

<book category="WEB">
  <title lang="en">XQuery Kick Start</title>
  <author>James McGovern</author>
  <author>Per Bothner</author>
  <author>Kurt Cagle</author>
  <author>James Linn</author>
  <author>Vaidyanathan Nagarajan</author>
  <year>2003</year>
  <price>49.99</price>
</book>

<book category="WEB">
  <title lang="en">Learning XML</title>
  <author>Erik T. Ray</author>
  <year>2003</year>
  <price>39.95</price>
</book>

</bookstore>
```

Web Scraping

- Xpath Syntax
  - ✓ Selecting nodes: some useful path expressions

Expression	Description
nodename	Selects all nodes with the name "*nodename*"
/	Selects from the root node
//	Selects nodes in the document from the current node that match the selection no matter where they are
.	Selects the current node
..	Selects the parent of the current node
@	Selects attributes

In the table below we have listed some path expressions and the result of the expressions:

Path Expression	Result
bookstore	Selects all nodes with the name "bookstore"
/bookstore	Selects the root element bookstore **Note:** If the path starts with a slash (/) it always represents an absolute path to an element!
bookstore/book	Selects all book elements that are children of bookstore
//book	Selects all book elements no matter where they are in the document
bookstore//book	Selects all book elements that are descendant of the bookstore element, no matter where they are under the bookstore element
//@lang	Selects all attributes that are named lang

Web Scraping

- Xpath Syntax

```

Web Scraping

- Xpath Syntax
  - ✓ Predicates, unknown nodes, and several paths

Predicates

Predicates are used to find a specific node or a node that contains a specific value.

Predicates are always embedded in square brackets.

In the table below we have listed some path expressions with predicates and the result of the expressions:

Path Expression	Result
/bookstore/book[1]	Selects the first book element that is the child of the bookstore element. **Note:** In IE 5,6,7,8,9 first node is[0], but according to W3C, it is [1]. To solve this problem in IE, set the SelectionLanguage to XPath: *In JavaScript:* *xml*.setProperty("SelectionLanguage","XPath");
/bookstore/book[last()]	Selects the last book element that is the child of the bookstore element
/bookstore/book[last()-1]	Selects the last but one book element that is the child of the bookstore element
/bookstore/book[position()<3]	Selects the first two book elements that are children of the bookstore element
//title[@lang]	Selects all the title elements that have an attribute named lang
//title[@lang='en']	Selects all the title elements that have an attribute named lang with a value of 'en'
/bookstore/book[price>35.00]	Selects all the book elements of the bookstore element that have a price element with a value greater than 35.00
/bookstore/book[price>35.00]/title	Selects all the title elements of the book elements of the bookstore element that have a price element with a value greater than 35.00

Selecting Unknown Nodes

XPath wildcards can be used to select unknown XML elements.

Wildcard	Description
*	Matches any element node
@*	Matches any attribute node
node()	Matches any node of any kind

In the table below we have listed some path expressions and the result of the expressions:

Path Expression	Result
/bookstore/*	Selects all the child element nodes of the bookstore element
//*	Selects all elements in the document
//title[@*]	Selects all title elements which have at least one attribute of any kind

Selecting Several Paths

By using the | operator in an XPath expression you can select several paths.

In the table below we have listed some path expressions and the result of the expressions:

Path Expression	Result
//book/title | //book/price	Selects all the title AND price elements of all book elements
//title | //price	Selects all the title AND price elements in the document
/bookstore/book/title | //price	Selects all the title elements of the book element of the bookstore element AND all the price elements in the document

Statistics > Machine Learning

Exact heat kernel on a hypersphere and its applications in kernel SVM

Chenchao Zhao, Jun S. Song

(Submitted on 5 Feb 2017)

Many contemporary statistical learning methods assume a Euclidean feature space, however, the "curse of dimensionality" associated with high feature dimensions is particularly severe for the Euclidean distance. This paper presents a method for defining similarity based on hyperspherical geometry and shows that it often improves the performance of support vector machine compared to other competing similarity measures. Specifically, the idea of using heat diffusion on a hypersphere to measure similarity has been proposed and tested by \citet{Lafferty:2015uy}, demonstrating promising results based on an approximate heat kernel, however, the exact hyperspherical heat kernel hitherto remains unknown. In this paper, we derive an exact form of the heat kernel on a unit hypersphere in terms of a uniformly and absolutely convergent series in high-dimensional angular momentum eigenmodes. Being a natural measure of similarity between sample points dwelling on a hypersphere, the exact kernel often shows superior performance in kernel SVM classifications applied to text mining, tumor somatic mutation imputation, and stock market analysis. The improvement in classification accuracy compared with kernels based on Euclidean geometry may arise from ameliorating the curse of dimensionality on compact manifolds.

Web Scraping

- Step 2: Analyzing the HTML Structure
  - ✓ Extract the link information
  - ✓ Should be familiar to the usage of CSS Selector
    - http://www.w3schools.com/cssref/css_selectors.asp

CSS Selectors

In CSS, selectors are patterns used to select the element(s) you want to style.

Use our CSS Selector Tester to demonstrate the different selectors.

The "CSS" column indicates in which CSS version the property is defined (CSS1, CSS2, or CSS3).

Selector	Example	Example description	CSS
.class	.intro	Selects all elements with class="intro"	1
#id	#firstname	Selects the element with id="firstname"	1
*	*	Selects all elements	2
element	p	Selects all <p> elements	1
element,element	div, p	Selects all elements and all <p> elements	1
element element	div p	Selects all <p> elements inside elements	1
element>element	div > p	Selects all <p> elements where the parent is a element	2
element+element	div + p	Selects all <p> elements that are placed immediately after elements	2
element1~element2	p ~ ul	Selects every element that are preceded by a <p> element	3
[attribute]	[target]	Selects all elements with a target attribute	2
[attribute=value]	[target=_blank]	Selects all elements with target="_blank"	2
[attribute~=value]	[title~=flower]	Selects all elements with a title attribute containing the word "flower"	2
[attribute|=value]	[lang|=en]	Selects all elements with a lang attribute value starting with "en"	2
[attribute^=value]	a[href^="https"]	Selects every <a> element whose href attribute value begins with "https"	3
[attribute$=value]	a[href$=".pdf"]	Selects every <a> element whose href attribute value ends with ".pdf"	3
[attribute=value]*	a[href*="w3schools"]	Selects every <a> element whose href attribute value contains the substring "w3schools"	3

Web Scraping

- Step 2: Analyzing the HTML Structure
  - ✓ Extract the link information

```
tmp_list <- read_html(tmp_url) %>% html_nodes('div#dlpage') %>%
                                   html_nodes('a[title="Abstract"]') %>% html_attr('href')
```

    - find the node (div id = "dlpage") → find the node title attribute is Abstract → Store the attribute value of 'href' to the tmp_list
  - ✓ Values that are stored in the "tmp_list"

```
> tmp_list
 [1] "/abs/1701.06134" "/abs/1701.00798" "/abs/1701.00487" "/abs/1612.09535"

<b>[v1]</b> Sun, 5 Feb 2017 04:55:14 GMT  (1209kb,D)<br />
</div>
```

Web Scraping

- Step 3: Extract necessary information

  ✓ Step 3-5: Extract Meta information

```
# meta
tmp_meta <- tmp_paragraph %>% html_nodes('div.submission-history') %>% html_text
tmp_meta <- lapply(strsplit(gsub('\\s+', ' ',tmp_meta), '[v1]', fixed = T),'[',2) %>% unlist %>% str_trim
meta <- c(meta, tmp_meta)
```

  - From tmp_paragraph → find the node whose div class name is "submission-history" → Store the html text to tmp_meta

```
> tmp_meta
[1] "\nSubmission history\nFrom: Jun Song [view email]\n[v1] Sun, 5 Feb 2017 04:55:14 GMT  (1209kb,D)"
```

  - Replace all spaces by a single space → Split the text (split point = [v1]) → Take the second element → Unlist it → trim the text

```
> tmp_meta
[1] "Sun, 5 Feb 2017 04:55:14 GMT (1209kb,D)"
```

Web Scraping

- Step 4: Repeat the process and export the data
  - ✓ Elapsed time for data collection

```
> end - start # Total Elapsed Time
 사용자  시스템 elapsed
  93.62  153.46  257.50
```

  - ✓ Check the dataset

2	1	Exact heat kernel on a hypersphere	Chenchao Zhao, Jun S. Song	Machine Learning (stat.ML)	Many contemporary statistical learning methods assume a Euclidean feature space, however, the "curse of dimensionality" associated with high feature dimensions is particularly severe for the Euclidean distance. This paper presents a method for defining similarity based on hyperspherical geometry and shows that it often improves the performance of support vector machine compared to other competing similarity measures. Specifically, the idea of using heat diffusion on a hypersphere to measure similarity has been proposed and tested by #citet{Lafferty:2015uy}, demonstrating promising results based on an approximate heat kernel, however, the exact hyperspherical heat kernel hitherto remains unknown. In this paper, we derive an exact form of the heat kernel on a unit hypersphere in terms of a uniformly and absolutely convergent series in high-dimensional angular momentum eigenmodes. Being a natural measure of similarity between sample points dwelling on a hypersphere, the exact kernel often shows superior performance in kernel SVM classifications applied to text mining, tumor somatic mutation imputation, and stock market analysis. The improvement in classification accuracy compared with kernels based on Euclidean geometry may arise from ameliorating the curse of dimensionality on compact manifolds. 3	2	On Practical Accuracy of Edit Distar	Hiroyuki Hanada, Mineichi Kudo, A	Data Structures and Algorithms (cs.	The edit distance is a basic string similarity measure used in many applications such as text mining, signal processing, bioinformatics, and so on. However, the computational cost can be a problem when we repeat many distance calculations as seen in real-life searching situations. A promising solution to cope with the problem is to approximate the edit distance by another distance with a lower computational cost. There are, indeed, many distances have been proposed for approximating the edit distance. However, their approximation accuracies are evaluated only theoretically: many of them are evaluated only with big-oh (asymptotic) notations, and without experimental analysis. Therefore, it is beneficial to know their actual performance in real applications. In this study we compared existing six approximation distances in two approaches: (i) we refined their theoretical approximation accuracy by calculating up to the constant coefficients, and (ii) we conducted some experiments, in one artificial and two real-life data sets, to reveal under which situations they perform best. As a result we obtained the following results: [Batu 2006] is the best theoretically and [Andoni 2010] experimentally. Theoretical considerations show that [Batu 2006] is the best if the string length n is large enough (n >= 300). [Andoni 2010] is experimentally the best for most data sets and theoretically the second best. [Bar-Yossef 2004], [Charikar 2006] and [Sokolov 2007], despite their middle-level theoretical performance, are experimentally as good as [Andoni 2010] for pairs of strings with large alphabet size.
